

DTS Customer Case Study

Data Migration

Need:

The State of Michigan needed assistance to design and develop "Michigan Business One Stop" Portal application.

Solution:

DTS staff provided database programming, data scrubbing and data loading services for the "Michigan Business One Stop" project, which provides single point of entry for business services and revolutionizes the way companies conduct business with the State of Michigan.

DTS staff performed business analysis, designed stored procedures, and developed PL/SQL programs and SQL scripts. Our staff coded batch processing scripts in UNIX shell and implemented them according to business requirements. Our team coded and configured data transfer procedures with FTP and EMAIL process. We developed and maintained Database objects such as tables, views, stored procedures, packages, and triggers for Oracle 11g database. We performed support and maintained scripts in TortoiseSVN. Throughout the project, we provided problem root cause analysis and developed resolutions for data issues.

Benefits:

Streamlined business operations and information sharing across departments of the State of Michigan resulting in more efficient operations, paperless environment, and reduced transaction costs while providing better and speedier service to Michigan businesses.
