

DTS Customer Case Study

Software Development

Need:

A leading automotive manufacturer based in Michigan needed assistance to design and develop a Java/J2EE based purchasing system.

Solution:

DTS staff provided design, development, integration and support services for the Supplier Information Management System (SIM) that enables suppliers to update and maintain their own data such as Hierarchy, Profile, Demographics, and also transfer the ownership of contacts. Our staff developed the application using Java/J2EE, Java Beans, JSP, Servlet, XML, Ajax, SQL, DB2 and JavaMail technologies.

Benefits:

The solution provided a centralized contact database of all suppliers in a consistent and updated manner that results in improved communication and collaboration between buyers and suppliers.
