

DTS Customer Case Study

Software Development

Need:

A leading business process outsourcing and financial services company based in Michigan needed assistance to design and develop .NET based systems.

Solution:

DTS staff designed and developed applications based on **Service Oriented Architecture (SOA)**. Our staff is responsible for developing/enhancing the E-Presentation application, a Software as a Service (SaaS) application, utilizing .NET framework 3.5. Our staff developed framework that supports SaaS principles and developed applications using design patterns. We deployed the application for customers and supported the applications. We developed webservices using Windows Communication Foundation (WCF).

Benefits:

Successful delivery of applications meeting client schedules that enabled clients to streamline their invoicing and payment processes.
